

Sl.No.	Question	Marks	Module
1	Define Human Computer Interaction.	2	1
2	Define mental models and state their importance in interface design.	2	1
3	Define visual angle and state how to calculate it.	2	1
4	Define iconic memory.	2	1
5	Define Reasoning. List its types.	2	1
6	Tabulate direct manipulation vs indirect manipulation.	2	1
7	Express the text entry devices.	2	1
8	Discuss Ergonomics.	2	1
9	Discuss the importance of grouping controls.	2	1
10	Examine the spreading activation affect the interferences effects during information recall from memory.	2	1
11	Show ACT model.	2	1
12	Classify the two main theories of forgetting.	2	1
13	Summarize three types of memory or memory function.	2	1
14	Point out distribution of practice effect.	2	1
15	Conclude the factors in the physical environment that directly affect the quality of the interaction and the user's performance.	2	1
16	Analyze the type of HCI paradigm could be used to monitor eruptions of active and hazardous volcanoes.	2	1
17	Discriminate two types of photoreceptor.	2	1
18	Judge the use of scroll bars and title bars.	2	1
19	Develop productive and reproductive problem solving.	2	1
20	Integrate the Models of interaction.	2	1
21	List Input and Output channels and discuss briefly about it.	5	1
22	Describe the model of the structure of human memory with diagrammatic illustration.	5	1
23	Discuss briefly about the types of memory in detail.	5	1
24	Describe five important differences between Short Term Memory and Long Term Memory.	5	1
25	Illustrate the similarities and differences in human memory and computer memory.	5	1
26	Demonstrate different types of mental models, along with their importance in interface design.	5	1

27	Explain how the user performance is improved using ergonomics.	5	1
28	Point out briefly four different interaction styles used to accommodate the dialog between user and computer.	5	1
29	Appraise digital paper in details.	5	1
30	Appraise display devices in details.	5	1
31	Formulate (in words as well as graphically) the interaction framework introduced in Human–Computer Interaction.	5	1
32	Generalize how Human-Computer Interaction can be used to explain problems in the dialog between a user and a computer.	5	1
33	Describe the guidelines for data display and data entry.	10	1
34	State requirements to perform cognitive walkthrough of a system.	10	1
35	Discuss the factors that can limit the speed of an interactive computer system.	10	1
36	Demonstrate the block diagram representing human-computer interaction framework and explain it.	10	1
37	Demonstrate how the system designer can minimize the memory load of the user.	10	1
38	Explain the elements of the WIMP interface.	10	1
39	Summarize various types of users and the organizational issues to be considered in designing an interactive system with examples.	10	1
40	Compose the stages of Norman's model of interaction.	10	1
41	Define design.	2	2
42	Write different design processes.	2	2
43	State the golden rule of design.	2	2
44	Write down the possible ways to set measurement levels in a usability specification.	2	2
45	Define localization or internationalization.	2	2
46	Summarize the advantages and disadvantages of Prototyping Model.	2	2
47	Define multithreading.	2	2
48	Relate a model of Interaction design process.	2	2
49	Summarize the different implications of navigation design.	2	2
50	Discuss on the usage of colors in emergency response panels.	2	2
51	Discriminate universal design.	2	2

52	Show the three main goals of Evaluation.	2	2
53	Illustrate UIMS.	2	2
54	Show the warning about iterative design.	2	2
55	Compare the Levels of interaction.	2	2
56	Compare formative evaluation vs summative evaluation.	2	2
57	Do you think that prototyping will solve all problems associated with user interfaces design? Analyze it.	2	2
58	Compare Efficiency & Satisfaction.	2	2
59	Summarize the basic categories of the Smith and Mosier guidelines.	2	2
60	Develop the three main approaches to prototyping.	2	2
61	Write down the three categories of the principles to support usability.	2	2
62	Illustrate about Navigation design through Levels of Interaction and Screen design.	5	2
63	Demonstrate hill-climbing approach.	5	2
64	Explain an example of a scenario for the personal movie player.	5	2
65	Explain the block diagram of application functional hierarchy.	5	2
66	Summarize the activities in the life cycle.	5	2
67	Choose and discuss about the three main approaches to prototyping.	5	2
68	Write down the principles affecting learnability in detail.	5	2
69	Organize the summary of principles affecting flexibility in detail.	5	2
70	Write down the principles of good UI design.	5	2
71	Using the tour booking form as an example, try to formulate its suitability for automation.	5	2
72	Mention and Explain the Shneiderman's Eight Golden Rules of Interface Design.	5	2
73	State and Explain Norman's Seven Principles for Transforming Difficult Tasks into Simple Ones.	10	2
74	With a neat sketch, demonstrate Interaction design process and golden rule of Design.	10	2
75	Analyze in detail about the activities in the waterfall model and spiral model of the software life cycle.	10	2

76	Summarize some of the techniques that are available for producing rapid prototypes.	10	2
77	Provide a usability specification for an electronic meetings diary.	10	2
78	Write down a short notes on Cognitive walkthrough and Speech-based system is the phonetic typewriter.	10	2
79	Express the use of layout and other elements in the control panels.	10	2
80	Consider the following usability objective. Theatre booking clerks with low motivation, no computing experience and no previous training, working in a small and hectic box office, are able to learn to reserve or book seats within a one hour period. Demonstrate what measures could be taken and which techniques would you consider appropriate to test whether this objective was met?	10	2
81	List and discuss seven stages of action model.	10	2
82	Explain what are the seven principles give us a good starting point in considering universal design.	10	2
83	Justify what is the distinction between a process-oriented and a structure-oriented design rationale technique? Would you classify psychological design rationale as process-or structure-oriented.	10	1
84	Using the web design pattern language produce a design for an e-commerce site for a small retail business. How well does the language support the design process? Summarize in detail	10	2
85	You have been asked to compare user performance and preferences with two different learning systems, one using hypermedia, and the other sequential lessons. Design a questionnaire to find out what the users think of the system. How would you go about comparing user Performance with these two systems?	10	2
86	Write down the characteristics of computer support cooperative work systems.	2	3
87	State the group categorization based on their geographical and temporal location.	2	3
88	List the four elements of GOMS.	2	3
89	Classify stakeholders – an airline booking system.	2	3
90	Estimate conversation and give the basic conversational structure.	2	3
91	Define Bandwidth, latency and jitter.	2	3

92	Compare context and the types of context.	2	3
93	Differentiate Linear text vs. hypertext.	2	3
94	Explain the applications of hypermedia.	2	3
95	Discuss Web servers and web clients	2	3
96	Classify Breakdown and repair.	2	3
97	Illustrate the four types of textual communication.	2	3
98	Describe and illustrate the properties of these channels in terms of grounding constraints.	2	3
99	Analyze CUSTOM methodology.	2	3
100	Analyze Acronym for CATWOE.	2	3
101	Point out face-to-face communication.	2	3
102	Assess the utterances that can be classified into three kinds.	2	3
103	Summarize static content and dynamic content.	2	3
104	Formulate the process as grounding.	2	3
105	Develop Hypertext conversation structure.	2	3
106	Assess the utterances that can be classified into three kinds.	2	3
107	Explain the participatory design process utilizes a range of methods to help convey information between the user and designer.	5	3
108	Explain Effective Technical and Human Implementation of Computer-based Systems (ETHICS) and how the design groups then address the following issues and activities.	5	3
109	Write down the short notes on fixed content.	5	3
110	Develop the short notes on Automatic generation.	5	3
111	Compare Text and Hypertext.	5	3
112	Compare Text and Multimedia.	5	3
113	Compare Hypertext and Multimedia.	5	3
114	Illustrate the linguistic approach and use of Backus–Naur Form (BNF) rules to describe the dialog grammar.	5	3
115	Illustrate the linguistic models–BNF and Task Action Grammar in brief.	5	3
116	Write a short note on cognitive model.	5	3
117	Classify cognitive models and discuss the same.	10	3
118	Compare turn-taking, round-robin and free-for-all as floor control mechanisms. When might each be effective? Justify yours Answer	10	3

119	What is speech act theory? Explain positive and negative issues that have arisen when it has been embodied in a specific system.	10	3
120	A group of universities has decided to collaborate to produce an information system to help potential students find appropriate courses. The system will be distributed free to schools and careers offices on CD- ROM and will provide information about course contents and requirements, university and local facilities, fees and admissions procedures. Design your own approach to identify the main stakeholders for this system, categorize them and describe them and their activities, currently and with regard to the proposed system, using the CUSTOM framework.	10	3
121	One of the assumptions underlying the programmable user model approach is that it is possible to provide an algorithm to describe the user's behavior in interacting with a system. Taking this position to the extreme, choose some common task with a familiar interactive system (for example, creating a column of numbers in a spreadsheet and calculating their sum, or any other task you can think of) and describe the algorithm needed by the user to accomplish this task. Write the description in pseudocode. Does this exercise suggest any improvements in the system?	10	3
122	Consider the case of preparing a group presentation for a software project. Demonstrate the stages in specifying and designing UI for the same.	10	3
123	Explain some of the organizational issues that affect the acceptance and relevance of information and communication systems in detail.	10	3
124	List and explain the seven stages of soft systems methodology.	10	3
125	Briefly describe about the Three-state model.	10	3
126	Compare problem space model and interacting cognitive subsystems in detail.	10	3
127	Summarize an example of Cognitive complexity theory and express production rules.	10	3
128	Tabulate some World's largest mobile operators.	2	4
129	List the categories of mobile platforms.	2	4
130	Define Cocoa Touch.	2	4
131	Tabulate the pros and cons of mobile websites.	2	4

132	Define Iconography.	2	4
133	Write down how prototyping solve most of the interface design related problem.	2	4
134	Identify the importance of mobile applications (any four).	2	4
135	Discuss the pros and cons of web applications.	2	4
136	Contrast the three basic ways to define a color palette.	2	4
137	Discuss the typical flow of information on mobile devices.	2	4
138	Discover and give an example mobile site map.	2	4
139	Demonstrate on the usage of colors in emergency response panels.	2	4
140	Classify Fixed versus fluid.	2	4
141	Point out the pros and cons of web widgets.	2	4
142	Analyze the pros and cons of game applications.	2	4
143	Explain Information Architecture.	2	4
144	Summarize Mobile design tools with example.	2	4
145	Summarize two distinct types of navigation layouts for mobile devices.	2	4
146	Develop the layers of mobile ecosystem.	2	4
147	Design rules to be followed for Readability in mobile design.	2	4
148	Compare different Mobile application medium types.	5	4
149	Compare different Mobile application media matrix.	5	4
150	Summarise information Architecture with suitable diagram.	5	4
151	Discuss mobile information architecture with a neat diagram.	5	4
152	List and Explain Layout with respect to mobile design.	5	4
153	List and Explain Colour with respect to mobile design.	5	4
154	List and Explain Typography with respect to mobile design.	5	4
155	List and Explain Graphics with respect to mobile design.	5	4
156	Discuss the teasing content to confirm the user's expectations.	5	4
157	Discuss with an example clickstream for an iPhone web application.	5	4

158	Compare the Mobile web applications and Native applications with suitable case studies.	10	4
159	Give an example mobile information architecture that was designed with desktop users in mind rather than mobile users. Summarize the pros and cons of the Architecture.	10	4
160	Formulate the advantages and disadvantages of using the following Mobile Applications i.SMS ii.Mobile Websites iii. Mobile Web Widgets iv.Mobile Web Applications	10	4
161	List the ten world large Mobile operators and compose the rank, markets, technologies used, and subscriber numbers.	10	4
162	Mention and analyze the seven principles of Web 2.0.	10	4
163	Specify and develop the six simple rules for user with excellent readability.	10	4
164	Discuss the various elements of Mobile Design with a step by step method explain how to design an registration page foe movie ticket booking.	10	4
165	State and discover an example process flow diagram.	10	4
166	Elaborate and classify the broader set of devices supports operating systems.	10	4
167	Define Jesse James Garrett's Elements of User Experience.	10	4
168	Define Object Selection.	2	5
169	Define Mystery Meat.	2	5
170	Demonstrate Soft Mode.	2	5
171	List down the purpose of drag and drop.	2	5
172	Define complete pattern.	2	5
173	Tabulate the types of selection patterns.	2	5
174	Quote an example for virtual scrolling.	2	5
175	Discuss the various approaches for Drag and Drop Modules.	2	5
176	Differentiate Dragged object versus drop target.	2	5
177	Express Lightbox Effect.	2	5
178	Describe Carousel.	2	5
179	State and discover Fitt's law.	2	5
180	Demonstrate Anti pattern.	2	5
181	Discover why mutton is used.	2	5

182	Choose the best practices for Drag and Drop List.	2	5
183	Illustrate modal and non-modal overlays.	2	5
184	Mention and choose some nice attributes for toggle selection.	2	5
185	Mention and choose few things to keep in mind when using Input Overlays.	2	5
186	Summarize Inlay Versus Overlay.	2	5
187	Develop some issues with showing contextual tools.	2	5
188	Develop Lightweight overlays.	2	5
189	Illustrate Dialog Overlays.	5	5
190	Illustrate Detail Overlay.	5	5
191	Illustrate Input Overlays.	5	5
192	Illustrate in detail about Secondary Menu.	5	5
193	Illustrate how to inlay the information directly within the page.	5	5
194	Illustrate Tabs and its types.	5	5
195	Illustrate different types of inlays.	5	5
196	Find out the applications in which the following techniques. Summarize the use of technique in that application. a. Virtual Panning b. Zoomable user interface	10	5
197	Explain the combination of object selection and Toggle selection with suitable example. Analyze its advantages and disadvantages in detail	10	5
198	Summarize the Challenges of Drag and Drop.	10	5
199	Design the technique that is used to reveal customization controls of webpage. Discuss that technique with diagrammatic illustration.	10	5
200	Create your own example to design a drag and drop module on a Webpage and give the step by step interaction in detail with necessary diagrams.	10	5
201	Briefly describe the events available for cueing the user during a drag and drop interaction.	10	5
202	Tabulate the principles for designing rich web interface.	10	5
203	Demonstrate the process flow of web interface design.	10	5
